DETAILED ACTION

1. This office action is responsive to the amendment filed on 10/30/02. As directed by the amendment, claims 51 and 52 were cancelled, and no claim was added nor amended. Thus, claims 48-50 are presently pending in this application.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 48-50 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bleeker et al (6,017,320) in view of Chang (5,336,159).

Bleeker teaches a massaging apparatus comprising rollers and a suction chamber within a housing 2. Bleeker lacks a heat source. However, Cheng teaches a radiant heat source 32 for applying heat to the tissue. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide Bleeker's apparatus with a radiant heat source as taught by Chang, so as to enhance the massaging effect.

Regarding claim 50, the feature of choosing the radiant heat source having heat wavelength in the range of 600 nm to 1500 nm is considered as an obvious design choice within the knowledge of one skilled in the art, as is necessary and inherent upon various applications.

Response to Arguments

Art Unit: 3764

4. Applicant's arguments with respect to claims 48-50 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Henderson (4,086,922) is cited to show different heating elements.
